

## TL;DR Example

The screenshot shows a web browser with multiple tabs open, including 'Grok', 'Qwen', 'Claude', 'Prompts Break', 'TL;DR example', 'Why Prompts', and 'Ask Gemini'. The active tab is 'chatgpt.com/c/69ffffa9-5668-8324-9795-2a33289621fa'. The ChatGPT interface displays a prompt: 'Please Read the article in the below link on Prompts Break and provide a TLDR in 4-5 lines. "https://medium.com/@iam-abdulmoiz/why-prompts-break-context-windows-tokens-and-prompting-in-llms-aacb57e80675"'. The response is a TL;DR summary of the article, explaining why LLM prompts 'break' by focusing on tokens, context windows, and prompting styles. The summary states that LLMs process text as tokens (not words) and every prompt + response must fit within a fixed context window. When prompts become too long, older instructions get dropped, causing the model to ignore or forget information. It also compares single-shot vs few-shot prompting, showing that examples improve consistency but consume more tokens and increase cost. Overall, effective prompting is about balancing clarity, context size, and token efficiency to improve reliability and reduce API costs. The response is followed by a 'Sources' section with a link to the original article.

## Getting the output for the same prompt using ELI-15 and ELI-10

The screenshot shows the same ChatGPT interface as the first image, but with a different URL: 'chatgpt.com/c/6a00015f-a440-83a8-a253-3224e1e96e10'. The prompt is identical: 'Please Read the article in the below link on Prompts Break and provide ELI-15 "https://medium.com/@iam-abdulmoiz/why-prompts-break-context-windows-tokens-and-prompting-in-llms-aacb57e80675"'. The response is an ELI-15 version of the article 'Why Prompts Break'. It starts with a metaphor: 'Imagine an AI like a super-smart student taking an open-book exam — but the desk is tiny. It can only keep a limited number of pages open at once. That "desk space" is called the context window. When too much text is added, older instructions fall off the desk, so the AI "forgets" them.' It then explains that the AI also doesn't read words like humans do. It reads tiny chunks called tokens — parts of words, punctuation, spaces, etc. So a long prompt can secretly become way more tokens than expected, filling the desk faster and increasing API cost. Finally, it lists the common reasons why prompts usually fail: too much context, and vague instructions.

ChatGPT

The article explains that prompts usually fail for a few common reasons:

- too much context,
- vague instructions,
- bad examples,
- repetitive filler text,
- or trying to cram everything into one mega-prompt. Medium +1

It also compares:

- **Single-shot prompting** → giving one instruction and hoping the AI understands. Medium
- **Few-shot prompting** → showing examples first so the AI copies the pattern better. Medium

Big takeaway:  
Prompting is less like "talking to magic AI" and more like giving instructions to someone with:

- limited short-term memory,
- attention that gets diluted in long conversations,
- and a cost meter running for every word processed. Medium +2

## ELI-10

ChatGPT

Please Read the article in the below link on Prompts Break and provide ELI-10

"<https://medium.com/@iam-abdulmoiz/why-prompts-break-context-windows-tokens-and-prompting-in-llms-aacb57e80675>"

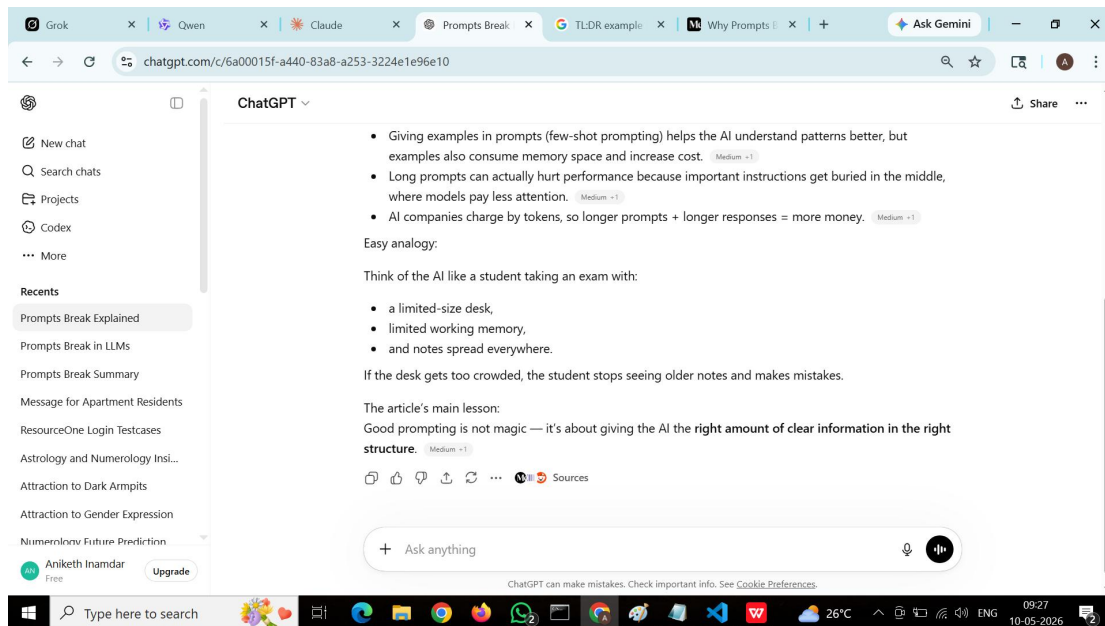

Imagine you're talking to a super-smart friend who can only remember a limited number of words at a time. That's basically how AI chatbots work.

Here's the simple version of the article:

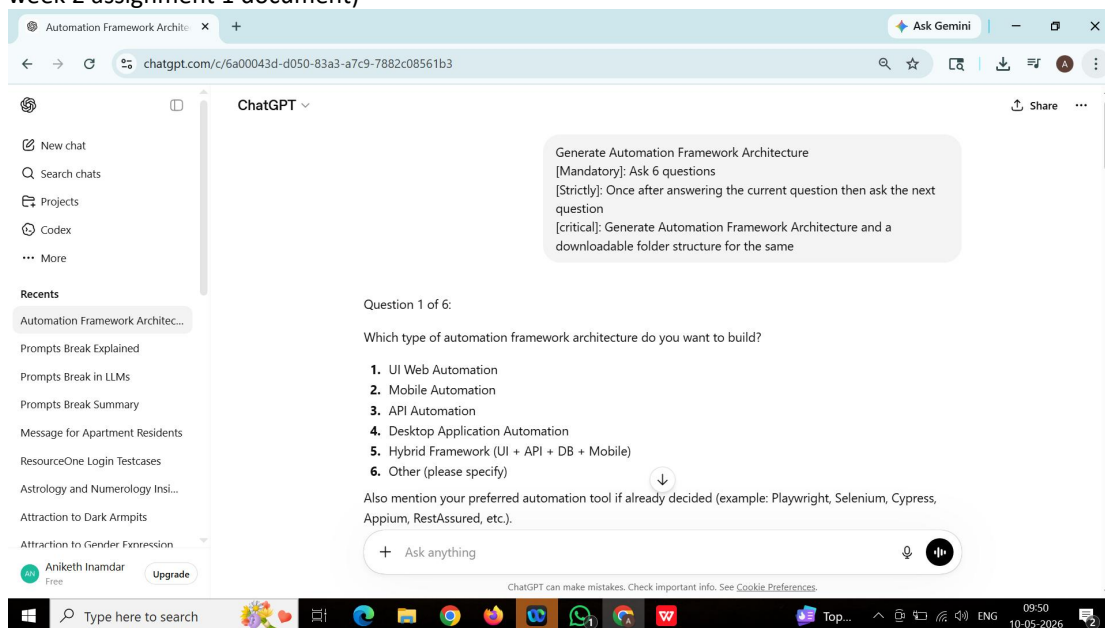

- AI does not read like humans. It breaks text into tiny pieces called **tokens**. Even one long word may become many tokens. Medium +1
- Every AI has a **context window**, which is like its short-term memory. If too many tokens are used, older instructions get pushed out and forgotten. Medium +1
- Prompts "break" when the AI gets overloaded, confused, or receives unclear examples. It's usually not random. Medium +1
- Giving examples in prompts (few-shot prompting) helps the AI understand patterns better, but examples also consume memory space and increase cost. Medium +1

## Generating Automation Architecture using chain of thoughts(Note the Zip folder is attached in the week 2 assignment 1 document)

## Question 1:

The screenshot shows the ChatGPT web interface. The browser address bar displays the URL: `chatgpt.com/c/6a00043d-d050-83a3-a7c9-7882c08561b3`. The left sidebar contains a 'Recents' list with the current chat titled 'Automation Framework Archite...'. The main chat area shows 'Question 1 of 6: Which type of automation framework architecture do you want to build?'. The response lists six options: 1. UI Web Automation, 2. Mobile Automation, 3. API Automation, 4. Desktop Application Automation, 5. Hybrid Framework (UI + API + DB + Mobile), and 6. Other (please specify). It also asks for a preferred automation tool. A user input bubble contains '1. UI Web Automation'. The bottom of the interface shows a Windows taskbar with the time 09:51 on 10-05-2026.

Automation Framework Archite... x + Ask Gemini

ChatGPT

Question 1 of 6:

Which type of automation framework architecture do you want to build?

1. UI Web Automation
2. Mobile Automation
3. API Automation
4. Desktop Application Automation
5. Hybrid Framework (UI + API + DB + Mobile)
6. Other (please specify)

Also mention your preferred automation tool if already decided (example: Playwright, Selenium, Cypress, Appium, RestAssured, etc.).

1. UI Web Automation

Question 2 of 6:

+ Ask anything

ChatGPT can make mistakes. Check important info. See [Cookie Preferences](#).

## Question2:

The screenshot shows the ChatGPT web interface for the second question. The browser address bar is the same. The left sidebar is identical. The main chat area shows 'Question 2 of 6: Which programming language and test framework do you want to use for the UI Web Automation framework?'. The response provides examples: Java + TestNG/JUnit, TypeScript + Playwright, JavaScript + Cypress, Python + PyTest, and C# + NUnit. It also lists additional options: BDD support (Cucumber), Parallel execution, CI/CD integration, and Reporting tools (Allure, Extent, etc.). A user input bubble contains 'Java + TestNG/JUnit Parallel Execution, CI/CD Integration, Extent Report'. The bottom of the interface shows a Windows taskbar with the time 09:52 on 10-05-2026.

ChatGPT

Question 3 of 6:

Which design pattern and framework style do you prefer for the automation architecture?

Options:

1. Page Object Model (POM)
2. Page Factory
3. Screenplay Pattern
4. Hybrid Framework (POM + Data-Driven + Keyword-Driven)
5. Modular Framework
6. BDD with Cucumber
7. No preference (I will recommend best practice)

You can choose multiple options.

4. Hybrid Framework (POM + Data-Driven + Keyword-Driven, Page Factory)

Question 4 of 6:

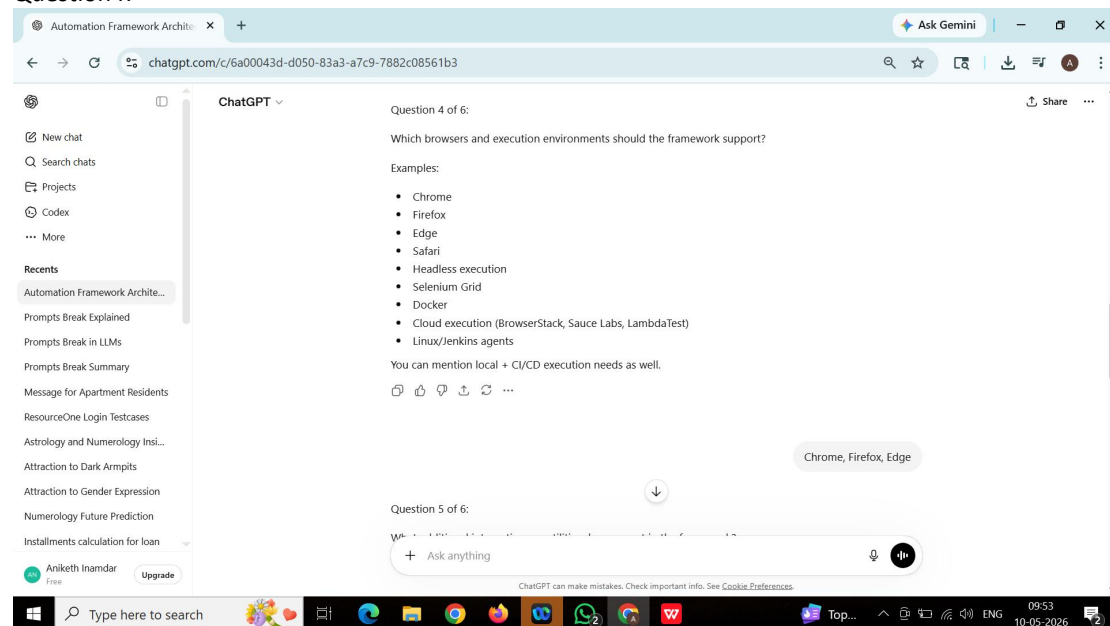

Which browsers and execution environments should the framework support?

Examples:

At the bottom of the chat area, there is a text input field with the placeholder "Ask anything" and a microphone icon. The Windows taskbar is visible at the bottom, showing the search bar, taskbar icons, and system tray with the date and time (10-05-2026, 09:55).

## Using Chain of Thoughts to develop Test Strategy

The screenshot shows the ChatGPT web interface. The browser tabs include 'Test Strategy for Insurance' and 'Automation Framework Archite...'. The address bar shows the URL 'chatgpt.com/c/6a000a21-8728-8324-868c-e7c2b866258c'. The left sidebar shows a list of recent chats, with 'Test Strategy for Insurance' selected. The main chat area displays the following text:

Develop a test strategy document for Customer Benefits solution for Insurance application.

Mandatory : Ask 5 questions  
Strictly: Do not ask the 2nd question till the first question is answered  
Critical: Please generate a test Strategy once all the questions are answered and also please paste the same in the downloadable file.

Question 1 of 5:  
What are the key modules or business functionalities included in the Customer Benefits solution for the Insurance application?

Examples:

- Policy Benefits Management
- Claims Benefits Validation
- Loyalty / Rewards
- Premium Discounts
- Customer Eligibility
- Benefit Calculation Engine
- Notifications
- Third-party integrations

The bottom of the interface shows a Windows taskbar with the search bar, task icons, and system tray showing 30°C and 10:09 on 10-05-2026.

### Question1:

The screenshot shows the ChatGPT web interface with the same browser tabs and address bar as the previous screenshot. The left sidebar shows the same list of recent chats. The main chat area displays the following text:

Question 1 of 5:  
What are the key modules or business functionalities included in the Customer Benefits solution for the Insurance application?

Examples:

- Policy Benefits Management
- Claims Benefits Validation
- Loyalty / Rewards
- Premium Discounts
